OHMiO

Simple home automation
for any mechanical motor

NEW OHMIO HOME AUTOMATION PUSHBUTTON

Simple home automation for solar control

OHMIO is the PERSAX home automation push button that allows you to control blinds, shades, and other solar control systems with mechanical motors, without needing to replace the motor or modify the existing installation.

A practical and efficient solution for modernizing existing installations or incorporating home automation into new projects, providing comfort, connectivity, and intelligent control without construction work or technical complexity.

Intelligent control, intuitive use

OHMIO connects to the Wi-Fi network and allows you to manage solar control systems both from the push button and from a mobile app, offering a simple user experience for the end user and quick integration for the installer.

Compatible and versatile

Compatible with all types of mechanical motors.

Applicable to blinds, roller shades, Helia Screens, and other solar protection systems. Ideal for homes, renovations, and projects where efficient home automation is desired.

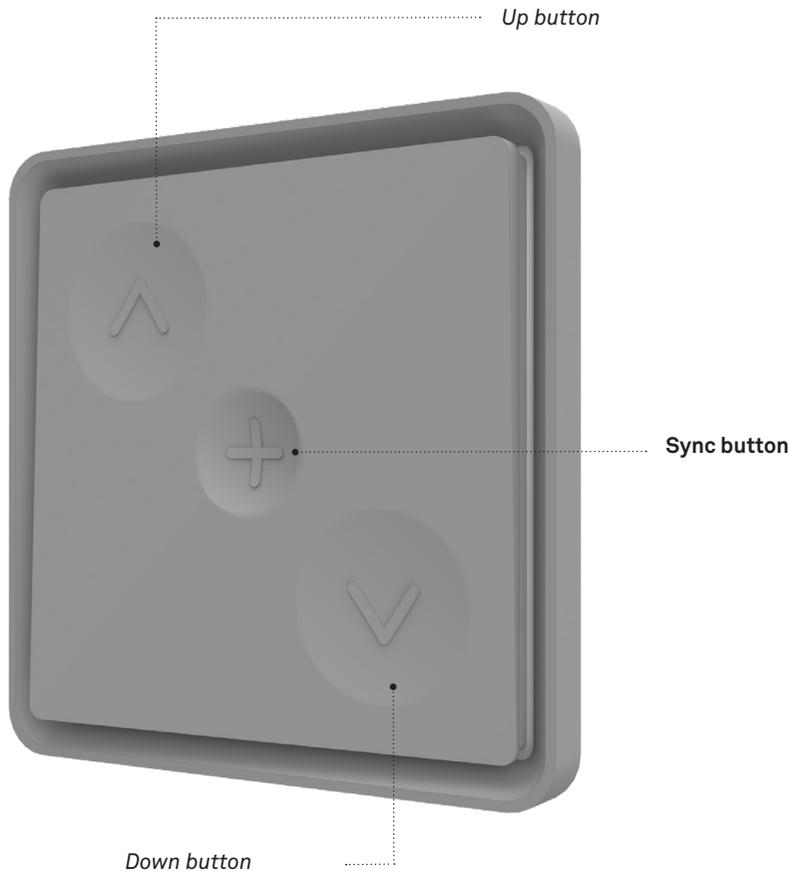

Greater comfort, efficiency, and security

Automating solar control systems optimizes natural light, reduces heat gain in summer, and improves insulation in winter, contributing to energy savings.

Furthermore, remote control and scheduling allow you to simulate occupancy, providing added security when the home is unoccupied.

Easy installation, immediate results

OHMIO has been designed for quick installation and intuitive configuration, reducing assembly time and facilitating its commissioning from day one.

AVAILABLE COLORS

The OHMIO push-button system integrates seamlessly with the room's aesthetics, and is therefore available in four colors: GREY, WHITE, BLACK, and BRONZE.

MAIN FEATURES

MULTI-DEVICE CONTROL

You can share control of the blinds with the rest of the inhabitants of your home through the MySmart Window app, available for both iOS and Android devices through their respective app stores:

APP STORE (iOS / iPhone)

PLAY STORE (Android)

CREATING GROUPS BY ROOM

The application allows the creation of different groups of blinds (or shades) to facilitate the control of the different rooms of the home without having to operate each blind individually.

PROGRAMMING

The OHMIO system allows you to program specific actions based on your needs. You can program the operation of the blinds to, for example, make better use of sunlight or to save on heating in winter.

EASY INSTALLATION

The OHMIO push button doesn't require a motor change to function. If you have a mechanical motor with a wall-mounted push button, installation is very simple: just replace your old push button with the new OHMIO. In just a few minutes, you can enjoy the convenience of home automation without excessive costs.
