ROLLER SHUTTER WITH ADJUSTABLE SLATS

ali@ka

The new aluminium roller shutter system with adjustable slats.

archiproducts[®]
DESIGN AWARDS
—
WINNER 2017

ADJUSTABLE ROLLER SHUTTER

Alika is an aluminium roller shutter system with adjustable slats. It can be operated going up and down, as a usual roller shutter. In its down position, Alika allows a progressive orientation of the slats, to adapt light and air levels inside the room.

It has an easy and quiet operation. With Alika it is possible to create your own spaces, with a maximum comfort, without sacrificing privacy.

The use of Alika is easy and achievable for anyone. It can be operated with electric motors available in the market (with a push button or a remote control). Alika can be integrated in domotic systems, and helps to save energy and to increase the passive security of the house.

Adjustable system

The adjustable system allows to gradually adapt all the slats from 0° until 90°, to move from darkness light to a progressive adaptation of light and air. The slats special design facilitates, in case of rain, the draining of the water outwards, still in the maximum opening position.

It is a roller shutter with side holds, that's why Persax does not guarantee the complete darkness when the shutter is lowered.

- Weight: 10,5 kg/m²
- Thickness of the slat: 14 mm
- High of the slat: 60 mm
- Maximum dimension of the shutter: 200 x 280 cm (width x high)
- Complies the UNI EN 13659 Standard:
 - Wind resistance: CLASS 6
 - Mecanic resistance: CLASS 3
- Improve the thermal enclosure of the building according to the Spanish Technical Code of Edifications (DA DB-HE1).

It is a roller shutter with side holds, that's why Persax does not guarantee the complete darkness when the shutter is lowered.

QUALITY OF THE RAW MATERIALS

All of the products quality process is verified. Alika uses the best raw materials and the latest technology of the market. Primary aluminium, Stainless steel and specific plastic materials are the major materials

used by Alika which is, therefore, 100% recyclable. Alika requires very little maintenance, moreover it is a certified product.

PATENTED SYSTEM

Alika is the first roller shutter with adjustable slats that rotates from 0° to 90°.

RELIABLE AND WITHOUT NOISES

Alika does not use a complex mechanism, the slats are adjustable in a natural and automatic way, thanks to its own inertial force. The operating of Alika is soft and without any noise.

ENERGY SAVINGS

Alika helps to reduce energy costs at home.

DESIGN

A special attention is given to the design of every component, offering the possibility of choosing profiles and components colours.

EASY AND SIMPLE

Alika allows an easy installation and its use is simple, as a standard roller shutter.

DOMOTIC SYSTEMS

Alika can be integrated in any domotic system.

SOMEWHAT MAINTENANCE

Alika requires very little maintenance. The cleaning is reliable thanks to the curving shapes of the slats.

CE MARKING

Alika complies with the UNI EN 13659 Standard and has its correspondent CE marking.

COMFORT AND PRIVACY

The slats adjustable system guarantee a maximum comfort and, at the same time, a maximum privacy.

GREATER SECURITY

Alika is made with reinforced aluminium profiles and stainless steel components, which contribute to increase the passive security of the home.

ENVIRONMENT

All of Alika components, aluminium profiles as well as PVC components, are 100% recyclables.

AWARD WINNING DESIGN

Alika won the "Archiproducts Design Awards 2017" which recognizes its excellence in the design field.
